WHAT IS CLAIMED IS:

1. A torque indicator on a container having a cap, the torque indicator 1 comprising: 2 a range indicator on the container; 3 a visual indicator on the cap of the container, wherein as the cap is attached to the container, the visual indicator 5 position relative to the range indicator show extent of cap engagement with the 6 container. 7 2. The torque indicator of claim 1, wherein the visual indicator is molded 1 on the cap. 2 3. The torque indicator of claim 1, wherein the range indicator is molded 1 on the container. 2 4. The torque indicator of claim 1, wherein the range indicator is one of a 1 decal, sticker, label and printing. 2 5. The torque indicator of claim 1, wherein the range indicator is 1 elongated and has a first end and a second end. 2 6. The torque indicator of claim 5, wherein the second end is narrower than the first end. 2 7. A method for indicating extent of engagement of a container cap on a 1 container, with the container cap and container having corresponding intermeshing 2 threads, the method comprising the steps of: 3 providing a range indicator on the container; 4 configuring the range indicator to represent the extent of engagement 5 of the cap to the container; providing a visual indicator on the cap; and aligning the visual indicator in indicative proximity to the range

8

indicator.

- 1 8. The method of claim 7, wherein the range indicator is one of a molded
- portion, a decal, a sticker, a label and a printing
- 1 9. The method of claim 8, wherein the range indicator includes one end
- that is narrower than another end.
